No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

The C Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 [C Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 c Ilgands, in preparing antibodies, in identifying proteins or peptide cleavage sites, in amino acid sequence analysis, and in monitoring to biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides having Zcytor14 activity can be used to treat in vivo. Polypeptides having Zcytor14 activity can be used to treat consecutional tool in genetics, molecular biology, protein chemistry and antibody production analysis, in the preparation of chemistry and antibody production analysis, in the preparation of determining mRNA and DNA localisation of Zcytor14 polymucleotide in cissues, for identifying related polymucleotides and polypeptides by nucleic acid hybridisation, in linkage-based testing for various diseases contain a mutation in the Zcytor14 gene. Zcytor14 coligonucleotide probes are useful for in vivo diagnosis, and for detecting and localising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             316

The invention relates to murine cytokine receptor, Zcytor14. The Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 ligands, in polypeptide is useful for identifying or isolating Zcytor14 ligands, in identifying proteins or peptide cleavage sites, in amino acid sequence analysis, and in monitoring biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides having Zcytor14 activity can be used to treat inflammation, such as rheumatoid arthritis. Zcytor14 polynucleotide may be used as educational tool in genetics, molecular biology, protein chemistry and antibody production analysis, in the preparation of expression constructs for bacterial, viral or mammalian expression, in determining mRNA and DNA localisation of Zcytor14 polynucleotide by nucleic acid hybridisation, in linkage-based testing for various diseases in murine models, and to determine whether a subject's chromosomes contain a mutation in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Zcytor14 gene. Zcytor14 oligonucleotide probes are useful for in vivo diagnosis, and for detecting and localising Zcytor14 gene expression in tissue samples. The present sequence is murine Zcytor14 variant, Zcytor14

The invention describes an isolated soluble receptor comprises at least one ZcytoR14 subunit, where the ZcytoR14 subunit comprises a polypeptide comprising fully defined 432 amino acid sequence (SEQ in No. 24) given in the specification. Also described are: an isolated soluble receptor comprising ZcytoR14, where ZcytoR14 comprises a polypeptide having SEQ ID NO. 3 and where the soluble receptor reduces the pro-inflammatory activity of either IL-17A comprising fully defined 153 amino acids (SEQ ID NO. 14) or IL-17F comprising fully defined 153 amino acids (SEQ ID NO. 16); an antibody or antibody fragment that binds to a polypeptide comprising fully defined 692 amino acids (SEQ ID NO. 16); an antibody or antibody fragment that binds to a polypeptide comprising fully defined 692 amino acids (SEQ ID NO. 16); and where the antibody or antibody fragment traduces the pro-inflammatory activity of either IL-17A (SEQ ID NO. 14) or IL-17F (SEQ ID NO. 16); and which antibody or antibody fragment reduces the pro-inflammatory disease in which IL-17A or IL-17F plays a crivity of either IL-17A (SEQ ID NO. 14) or IL-17F (SEQ ID NO. 16); reducing IL-17A-induced or IL-17P induced inflammatory disease in which IL-17A or IL-17F plays a color; and treating a pathological condition in a subject associated with 2 cytoR14 activity. The soluble receptor comprising at least one ZcytoR14 submunt is useful for treating an inflammatory disease, e.g. asthma; chronic inflammatory disease, arthritis, atopic dermatitis, or secritical and plantages.
                                                                                                                                  New isolated soluble receptor comprises at least one ZcytoR14 subunit, useful for treating an inflammatory disease, e.g. asthma, inflammatory bowel disease, ulcerative colitis, arthritis, atopic dermatitis, or
                                                                                                                                                                                                                                                                              Example 28; SEQ ID NO 25; 205pp; English.

919 1099 619 1039 619 739 799 217 237 979 257 277 161 181 189 197 859 8 8 8 8 8 g 8 6 8 6 a 8 8 8 6 8 6 8 B The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polymucleotides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to alicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies penerated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents CDNA encoding the mouse DCRS7 polypeptide Isolated antigenic human or mouse DNAX receptor subunit-like polypeptide useful for detecting antibodies generated in response to presence of increased protein levels or immunological disorders. The invention relates to modulating (M1) activity of cell, by contacting cell with an agonist or antagonist of DNAX cytckine receptor subunit (DCRS9) or of interleukin (IL)-17C where the cell modulates psoriasis, inflammatory bowel disorder (IBBD), interstitial lung disorder, asthma or allergy, or atherosclerosis. Also provided are methods for treating (M2) allergy, or atherosclerosis. Also provided are methods for treating (M2) camposing (M3) a disorder amministration of the modulator and sample from a test subject with a binding composition that specifically sample from a disorder with a binding composition that specifically for modulating an activity of a cell. (M2) is useful for treating a subject suffering from a disorder such as psoriasis, IBD, interstitial ung disorder is idiopathic pulmonary fibrosis, eosinophilic granuloma, or hypersensitivity pneumonitis. The IBD is Crohn's disease or ulcerative colitis. The present sequence represents a mouse DCRS7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        258

The	The present invention provides the protein and coding sequences of CDNAs isolated from human, murine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in maintaining tissue integrity, in wound healing and in modulating immune responses. The present sequence is a CDNA of the invention

polypeptide, with 85% or greater sequence identity to a polypeptide with a sequence appearing as AAU98781-AAU98792, where IL-17RL binds to an IL-17 selected from IL-17R, IL-17C, IL-17E and IL-17R. Also included are IL-17RL polymucleotides, antibodies, expression cassettes, transgenic host cells, a method of determining the aggressiveness of a prostate cancer cell, by determining the presence or absence in the cell of a group of IL-17RL (where the determination that the group is absent in the cell indicates that the cancer is more aggressive than a like cell in which the group is present) and a mammalian cell comprising a polymucleotide encoding an IL-17B antagonist, where the cell is selected from chondrocyte, synovicoyte, and mesenchymal stem cell. IL-17RL or the polymucleotide is useful for the manufacture of a medicament to restore androgen-responsiveness to a the manufacture of a medicament to restore androgen-responsiveness to a prostate cancer cell. IL-17RL is useful for decreasing catabolic activity in bone or cartilage in a mammal. IL-17RL is useful for inhibiting cossification or calcification, for diagnosing a cartilage degenerative disorder in a mammal, for inhibiting the rate of proteoglycan synthesis componentiate the activity of a bone morphogenetic protein in a mammal. The manufacture of a medicament to potentiate the activity of a bone morphogenetic protein in a mammal. The manufacture of a medicament to send a degenerative cartilage disorder sends a degenerative cartilage disorder sends a degenerative cartilage disorder sends selected from percenting.
                                                                                                                                                                                                                                                                                                                                                                                                    rheumatoid arthritis, relapsing polychondritis, seronegative spondyloathropathies, multiple sclerosis, allergic skin immune response and organ transplant rejection. IL-17RL is particularly a receptor for IL-17B (chondroleukin, a proinflammatory cytokine). The gene for IL-17RL is located on chromosome 3p25.3-3p24.1. The present sequence is the full

preparing antibodies, in identifying proteins or peptide cleavage sites, in amino acid sequence analysis, and in monitoring biological activities of both the native and tagged protein in vitor or in vivo. Polypeptides of both the native and tagged protein in vitor or in vivo. Polypeptides con having Zcytoria activity can be used to treat inflammation, such as rheumatoid arthritis. Zcytoria polypucleotide may be used as educational rheumatoid arthritis. Zcytoria biology, protein chemistry and antibody colin genetics, molecular biology, protein chemistry and antibody contrion analysis, in the preparation of expression constructs for bacterial, viral or mammalian expression, in determining mRNA and DNA clocalisation of Zcytoria polymucleotide in tissues, for identifying coloralisation of a subject's chromosomes contain a mutation in the determine whether a subject's chromosomes contain a mutation in the determine whether a subject's chromosomes contain a mutation in the determine and for detecting and localising Zcytoria gene expression in the diagnosis, and for detecting and localising Zcytoria gene expression in the creaptor, Zcytoria (and degenerate form of DNA encoding commine cytokine receptor, Zcytoria (AABI4559)

The invention relates to murine cytokine receptor, Zcytor14. The Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 ligands, in preparing antibodies, in identifying proteins or peptide cleavage slites, in amino acid sequence analysis, and in monitoring biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides committee are considered as the construction analysis, in the preparation of expression constructs for col in genetics, molecular biology, protein chemistry and antibody condition analysis, in the preparation of expression constructs for bacterial, viral or mammalian expression, in determining manha and DNA concertal, viral or mammalian expression, in determining manha and to caltered polymucleotides by nucleic acid hybridisation, in linkage-based testing for various diseases in murine models, and to determine whether a subject's chromosomes contain a mutation in the Caytor14 gene. Zcytor14 oligomucleotide probes are useful for in vivo diagnosis, and for detecting and localising Zcytor14 gene expression in tissue samples. The present sequence is a degenerate form of DNA encoding murine Zcytor14 variant, Zcytor14-1 (AAR14560)

The invention relates to primate and rodent DNAX cytckine receptor subunit (DCRS) polypeptides and the polymucleotides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be to label general or specific substrates. The subunits may also be to label general or elicit recognising antibodies, or antigens the used as an immunogen for the production of antisera or antibodies be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytckine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the or immunological disorders which lead to antibody production to the translation generic cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated antigenic human or mouse DNAX receptor subunit-like polypeptide useful for detecting antibodies generated in response to presence of increased protein levels or immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MetProValSerTrpPheLeuLeuSerLeuAlaLeuGlyArgAsnProValValValSer

The invention provides a new human cytokine receptor desinated Zcytor14. Zcytor14 can be expressed by standard recombinant methodology. The encoding mucleic acid is useful for detecting the expression of a cortor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 zcytor14 notice) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents a cDNA encoding the human cytokine receptor Zcytor14. New polypeptide encoding a human cytokine receptor Zcytor14, for treating inflammation e.g. rheumatoid arthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polynucleotide. The Zcytor14 gene is located on human chromosome 3p25-3p24. The Zcytor14 polynetide, polynucleotide and antibody are useful for treating xeroderma pigmentosum, Marfan-like connective tissue disorder, cardiomyopathy, diabetes mellitus, Fanconi anaemia, renal cel carcinoma, Marfan syndrome, Von Hippel-Lindau syndrome, or blepharophimosis. The present sequence is human cytokine receptor Zcytor14 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   154 ATGCCTGTGCCCTGGTTCTTGCTGTCCTTGGCCCGAGGCCGAGTGGTCGTCTTTCT

The invention describes an isolated soluble receptor comprises at least comprisation distributed 432 amino acids (SEQ ID NO. 3) or comprises comprisating fully defined 432 amino acids (SEQ ID NO. 3) or comprises a polypeptide amino acid residues 1-427 of a fully defined 67 amino acid sequence (SEQ ID NO. 24) given in the specification. Also described are: an isolated comprise receptor comprising SCYCR14, where ZCYCR14 comprises a copulate receptor comprises a copulate receptor comprises a copulate receptor comprises a copulate receptor comprises a copulate receptor comprises a copulate receptor comprise (SEQ ID NO. 3; and where the soluble receptor reduces the pro-inflammatory activity of either IL-17A comprising fully defined 153 amino acids (SEQ ID NO. 16); an antibody fragment that binds, compressed and where the antibody or antibody fragment that binds, compressed and where the antibody or antibody fragment reduces the pro-inflammatory activity of either IL-17A (SEQ ID NO. 14) or IL-17F (SEQ ID NO. 16); copulated with an inflammatory disease in which IL-17A or IL-17F plays a crole; and treating a pathological condition in a subject associated with a copulating an inflammatory disease, e.g. asterma; chronic inflammatory disease selected from indisammatory bowell disease, ulcerative colities, crohn's disease selected from endotoxemia, contributed with an inflammatory disease selected from endotoxemia, contributed with an inflammatory disease selected from endotoxemia, contributed with an inflammatory disease selected from endotoxemia.
                                                                                                                                                                                                                                    New isolated soluble receptor comprises at least one ZcytoR14 subunit, useful for treating an inflammatory disease, e.g. asthma, inflammatory bowel disease, ulcerative colitis, arthritis, atopic dermatitis, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            septicemia, toxic shock syndrome, or infectious disease. This sequence represents human IL-17A and IL-17F receptor zcytoR14.
                                                                               Levin SD, Kuestner RE, Gao Z;
                                                                                                                                                                                                                                                                                                                                                                      Example 28; SEQ ID NO 1; 205pp; English.

t and Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals screen for modulators of the compounds.

Claim 2; Fig 597; 774pp; English.

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumnour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression in the test sample of normal cells, whereby a configuration in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumnour necrosis factor (TNF) alpha release from human compacted with it. A specific polypeptide can be used to stimulate the proliferation of differentiation of chondrocyte cells. The stimulate the proliferation of differentiation of chondrocyte cells. The susceptibility to tumnour development, particularly advenal, lung, colon, breast, prostate, rectal, cervical, or liver tumnours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
